

Un.m = Unified micro structures particles Formula.

Ge = universal containment pattern

\mathcal{P} \propto rad.

\mathcal{P} is where the scaled of the planetary to galactic scale occur and which drives how much is it a plane will likely get stretch in any scale or plane use as part of the hidden underlying pattern which in the universe planetary galaxy starts moons from the smallest particles to make this particles been created to this universal phenomena.

M_{\pm} = micro scaling of 1 positive and negative plane scale , atomic scale , planetary scale ,galactic scale. Using $L_{scaled} = 1/5 \pm 1/2$ which 1 is from Fibonacci sequence .

$C \propto 5^2$ speed of light multiple to 5 in area 2

5 is equally aligned example in a plane there are 5 parting blocks that's hidden or likely cannot be seen and which this scaled upon which type of plane use example if you put a small plane and put 5 parting blocks on a planes equally this blocks can be used as an example as the universe which this blocks is equally aligned the same on a universe but this blocks is the part of the universe where planets , asteroids ,starts , black holes likely occur or creates but it can't be seen or touch it is hidden .

$Un.m = (\mathcal{P} \times radius) \times M_{\pm} \times c \propto 5^2$
