

The universe can be conceptualized as a vast, resonant gravitational-electromagnetic (Ge) confinement field a dynamic structure where energy and matter interact, not by random chance, but through hidden, pre-patterned laws that govern cosmic and quantum scales.

At its core, this field contains positive and negative poles, producing both attractive and repulsive forces. These forces generate a structured resonance an energy "blueprint" that guides the formation of matter:

Particles condense into atoms and elements. Atoms self-organize into molecules, stars, planetary systems, and galaxies. Matter formation is not instantaneous. It is governed by resonant cycles of energy, unfolding over millions or even billions of years.

The galactic formations of stars and planetary systems reflect this long-term accumulation and structuring of energy an ongoing

process within this universal confinement field.

Similarly, in smaller natural systems, we observe this same principle of gradual formation:

Consider stalactites and stalagmites they grow over thousands of years, as layer upon layer of mineral matter is deposited through the slow action of water and time. This is a direct, observable example of how time, resonance, and environmental patterns shape matter a microcosm of the same principles at work in the cosmos.

Thus, the formula:

$$U.N.m = G e^* m^+ \gamma^* c^2$$

proposes that universal constants (like c, the speed of light), micro-ratios

(m^+7), and the inherent structure of the gravitational-electromagnetic field govern how energy transforms into organized matter.

In this view, the universe is a self-organizing electromagnetic confinement system, in which matter emerges through the slow dance of resonance, symmetry, and time from the tiniest particles to the grandest galaxies.

It's not energy itself it's the pre-pattern where creation happens. What Is a Pre-Pattern?

A pre-pattern is like a template or blueprint in space time not made of energy or matter, but guiding how energy forms into matter. Pre-pattern A non-material structure in the fabric of space-time that

determines how matter and energy will take shape where resonance in this pattern reaches a threshold matter crystallizes.

It doesn't move, heat, or radiate it informs, aligns, and gives form.

Like sacred geometry Shapes that exist before physical form patterns that reality follows.
